Tasectan® contains cross-linked, stabilised gelatine: Gelatin Tannate.

Tasectan® targets the cause of diarrhoea.

Tasectan® is a complementary treatment to re-hydration.

Adequate liquid intake and a light diet is the recommended treatment for diarrhoea.

Diarrhoea can be caused by a bacterial or viral infection.

Diarrhoea is an imbalance between intestinal absorption and secretion of water and electrolytes.

Reduced absorption – increased secretion

IMBALANCE = DIARRHOEA

Diarrhoea can be caused by a bacterial or viral infection.

Tasectan® contains cross-linked, stabilised gelatine: Gelatin Tannate.

Tasectan® targets the cause of diarrhoea.

Tasectan® is a complementary treatment to re-hydration.

Adequate liquid intake and a light diet is the recommended treatment for diarrhoea.
Normal digestion. 80 – 90% of water is absorbed by the intestine.

Diarrhoea results from an imbalance between absorption and secretion where germs (bacteria, viruses and also parasites) and their toxins play an important role.

Tasectan: Forms a film which protects the intestinal wall; limits the contact of the toxins responsible for the inflammation and promotes their excretion; prevents the adhesion of Salmonella and E.Coli on the wall of the intestine.

With the infection cleared, the balance between secretion and absorption is restored and normal absorption resumes.

Tasectan Vs loperamide

Use in bacterial infections  
Use in infants & young children  
Effect upon intestinal motility  
Effect upon normal flora

Tasectan®: 
- No common side effects have been reported in association with the use of Tasectan

Iloperamide: 
- Headache, Constipation, Nausea

1. Nausea
Tasectan
Scientific studies

• Tasectan® (gelatin tannate) is a safe treatment, with proven efficacy in infants, children and adults
  • In a prospective observational study on adults with acute diarrhoea treated with gelatin tannate, the percentage of patients with ≥4 bowel movements reduced from 85.2% of patients at baseline to 0% of patients at 12 hours.2
  • In a prospective observational study on infants and children with acute diarrhoea treated with gelatin tannate, the percentage of patients with ≥4 bowel movements reduced from 98.9% of patients at baseline to 7.9% of patients at 12 hours.3

Treat the family with Tasectan

Adults
1–2 capsules every 4–6 hours

Children
Children under 2 years: Consultation with a doctor or pharmacist is recommended prior to use
Children aged 3–14 years: 1–2 sachets every 6 hours
Children aged 14–18 years: 2 sachets every 6 hours until symptoms disappear

Available from Ocean Healthcare & all Wholesalers.

Tasectan is a medical device that is used to restore the physiological functions of the intestinal walls. It is specifically formulated to control and reduce the symptoms associated with diarrhoea resulting from various causes. Usually effective within 12 hours. Composition Gelatin Tannate.
